

Project Design Phase

Solution Architecture

Date	18 February 2026
Team ID	LTVIP2026TMIDS81316
Project Name	TransLingua:AI-Powered Multi-Language Translator
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a structured process that bridges the gap between business requirements and technical implementation. For the TransLingua application, the architecture ensures scalable, secure, and efficient real-time language translation using AI.

Its goals are to:

Identify the most suitable AI and web technologies for multilingual translation.

Define the structure and behavior of the translation workflow.

Ensure secure API communication and data handling.

Provide a scalable and maintainable solution for real-time translation.
